

Identity Security For Online Medical Record

Online Medical Record version 2013 leverages SecureAuth to enable two factor authentication for electronic prescribing of controlled substances (EPCS)

SecureAuth is Online Medical Record's trusted partner for enhanced authentication.

- SecureAuth provides two factor authentication that is streamlined and fully integrated into the electronic prescribing process.
- Controlled substances are prescribed using exactly the same workflow as other medications. When you are ready to sign and send the prescription, Online Medical Record will prompt for the second factor.
- The SecureAuth client is available for both iOS and Android platforms
- SecureAuth works both inside and outside your network
